

Forge Assistant — App Sitemap

Navigation map of the desktop app (`bap.gui.gui_main --forge`). The left nav is split by audience: everyday **Play** actions vs **Developer** tools.

■ User / Play ■ Developer ■ System ■ Opens a separate window

● OVERVIEW

Dashboard

At-a-glance status of worlds, capture, and recent scans.

● PLAY · EVERYDAY USER ACTIONS

Worlds

World Manager: add / edit / remove worlds; pick browser mode; Test Connection; Attach / Disconnect Chrome; Scan & Reattach tabs.

Vision

Test Scan Live World, Scan All Attached Worlds, Open Offline Screenshot.
↳ opens [Vision Debugger](#) • [Scan-All Summary](#)

Review

Label detections as ground truth (which badge is 20/40/60/80/100).
↳ opens [Review Mode](#)

Datasets

Open a dataset in Review; import a snapshot; refresh.
↳ opens [Review Mode](#)

● DEVELOPER · CALIBRATION & DIAGNOSTICS

Validation

Vision validation across worlds — TP/FP behaviour, UNKNOWN safety.

Performance

Live performance panel (refreshes only while visible).

Reports

Rendered engineering / milestone reports.

● SYSTEM

Settings

Non-developer setup, mirroring the Tools menu: install browser, first-run setup, export diagnostics, open data folder.

● MENU BAR

Tools ▶ Live Data Collection... [\(window\)](#)

Tools ▶ Install browser...

Tools ▶ Export diagnostics...

Tools ▶ Open data folder

Tools ▶ Run first-run setup...

Help ▶ About

● SEPARATE WINDOWS

Vision Debugger — from Vision (Test Scan / Open Offline). OBSERVE-ONLY.

UI-state indicator · annotated scan (resizable image / details splitter) · Save artifacts · Label in Review · Save Snapshot · **Cursor Preview** · **Open & Verify** · **Open Province & Observe State** · **Panel Click-Point Calibration**.

Review Mode — label frames; keys 1-5 set 20/40/60/80/100, Delete removes a box, N = no badges, Enter saves.

Scan-All Summary — multi-world scan results at a glance.

Live Data Collection — Tools menu; read-only capture workbench (Start Session, Capture All Worlds, Validate Dataset).

● COMMAND-LINE TOOLS (OPERATOR / DEV)

```
python -m bap.forge.collect [--export] — summarise / export captured panel frames to dataset/panels/
```

```
python -m bap.forge.labeling <frames_dir> — assisted badge labeller
```

```
python -m bap.forge.detection.live_eval — vision evaluation
```

Forge Assistant · observe-only · generated from the live GUI navigation. Windows in purple open outside the main window.
